

Twingo 1 (C06) Cup Holder Installation Process (Old Central Console)

These installation instructions are made for the central console containing the coin organizer.

Recommendation before installing:
Install during the night to allow the double sided tape to cure and harden the bond to the console.

First, we need to remove the coin holder. To do this, press with your finger on one of the sides until the clip is released and you should be able to pull it off from the main plastic piece.

The central console should look like this picture.

Remove all the protective films from the double sided tape.

Align the cup holder base to the slot and attach firmly to the central console.

Hold in place for 2-3 minutes pushing down strongly.

Leave to rest during the night and avoid adding weight to it until the next day.

Enjoy your new cup holder.
